## Why drink water?

*Water plays an important role in your body's functions. Every system in your body depends on water:*

- Regulates body temperature
- Lubricates joints
- Carries nutrients to cells
- Moistens tissues
- Helps flush out waste
- Protects organs

grams sugar

Adults and children drink about 400 calories per day as beverages. Drinking water is your best bet when you're thirsty. Regular soda, energy or sports drink, and other sweet drinks usually

contain a lot more sugar and calories than you need. Water is a great choice because it is calorie-free, inexpensive, and you can find it nearly everywhere.

When water just won't do – enjoy the beverage of your choice, but just drink less. Check the serving size and the number of servings in the container and keep your portion small.

# Choose Water
